

2018 Storm Sewer Improvements

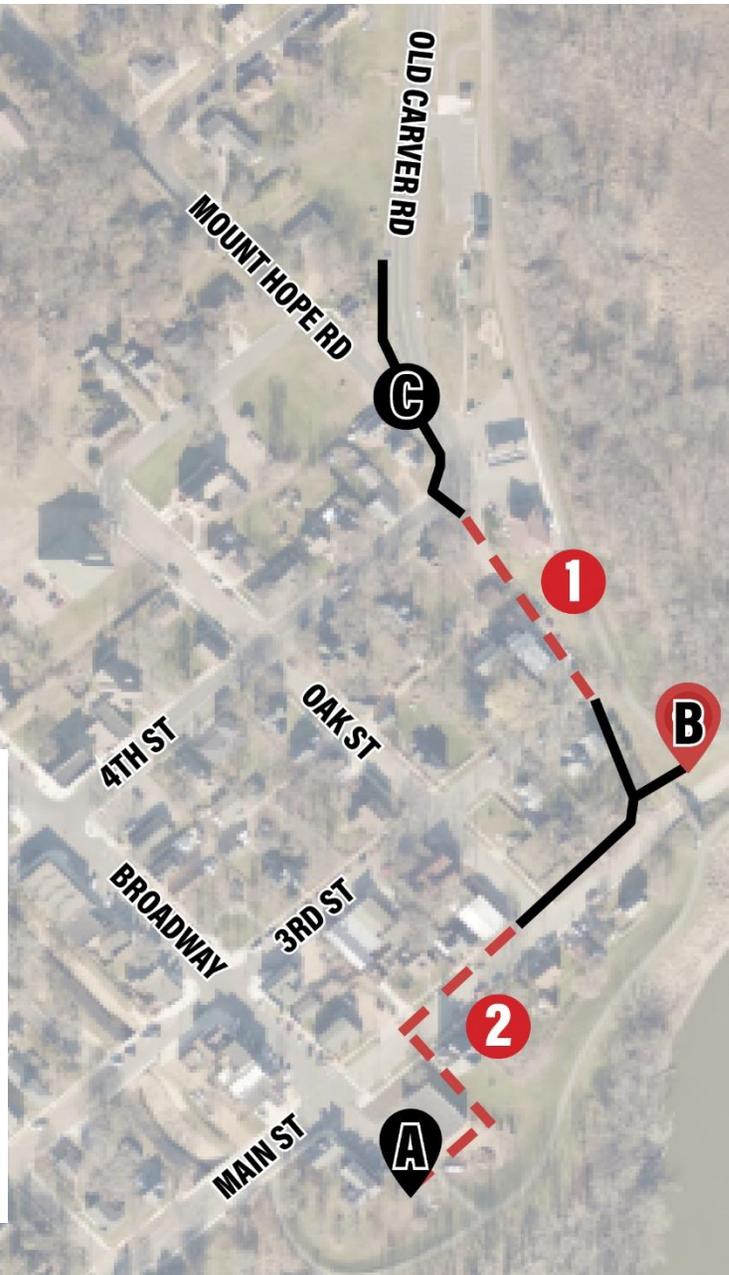

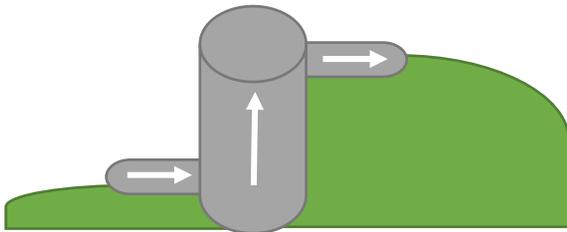

April 9, 2020

-  **LIFT STATION A WILL BE REMOVED**
-  **LIFT STATION B WILL BE REMOVED AND REPLACED**
-  **CONNECTIONS WILL BE MADE FROM A TO B, AND FROM C TO B**
-  **EXISTING PIPE LOCATIONS WILL REMAIN IN PLACE**

What is a lift station?

A lift station pumps water from a lower elevation to a higher elevation. This helps eliminate excess water and discharge it to a different source to prevent flooding.

Project Overview

The City of Carver will be making improvements to the downtown storm sewer system (as shown on the map) through 2020. Crews will continue working in area **B** this spring with work inside of the new storm water lift station.

Traffic Impacts

During the connection construction of **A** and **C**, road closures may occur. Please follow all marked detour signs during this time.

Work is tentatively scheduled to begin in area 1 on Monday, April 13th. This work includes the installation of new storm sewer drains and pipes.

Work in area 2 will begin once crews have finished area 1. Additional schedule information for this work will follow.
